ROBERT RAMOS

Software Engineer | Full-Stack + AI Engineer | AI Training & Evaluator
roberamos1525@gmail.com | linkedin.com/in/robert-ramos-6507973b5 | Mabalacat City, Pampanga, Philippines

PROFESSIONAL SUMMARY

Software Engineer with nearly 8 years of experience building and operating production software across fintech, full-stack product development, backend services, distributed systems, cloud platforms, and applied AI. I have progressed from performance-focused backend engineering in regulated financial systems to independent full-stack delivery, technical leadership, and AI-enabled product development. Recent work includes building LLM-powered workflows, integrating model capabilities into user-facing products, designing evaluation and regression checks for AI outputs, and debugging failures across prompts and model behavior, APIs, data flows, and frontend state. I am comfortable owning features from architecture and implementation through testing, CI/CD, observability, release, and production support. My core stack spans Python, TypeScript/JavaScript, Java, Go, Rust, React/Vue, REST APIs, Docker/Kubernetes, AWS/GCP, and modern AI tooling. I also work on AI training and evaluation, reviewing generated code and technical outputs for correctness, robustness, and maintainability.

SELECTED IMPACT

Applied AI product delivery
Delivered end-to-end LLM-powered features spanning UI, APIs, orchestration, evaluation & production safeguards

Engineering leadership
Led architecture decisions, code reviews, testing standards & release execution for remote fintech delivery

Production ownership
Owned features from design through release across full-stack services, CI/CD, observability & production support

20-25% performance improvement
Accelerated real-time financial microservices through JVM tuning, cache optimization & runtime analysis

TECHNICAL SKILLS

Applied AI & Evaluation	AI evaluation, AI-generated code review, model-output evaluation, task and rubric design, automated evals, regression checks, edge-case analysis, quality review
LLM & AI Systems	LLM integration, prompt engineering, RAG, embeddings, vector search, structured outputs, tool/function calling, agentic workflows, retrieval pipelines, AI-powered developer tooling
Full-Stack Engineering	React, Redux, Vue.js, Angular, TypeScript, JavaScript, REST APIs, frontend-backend integration, dashboards, internal tools, production UI workflows
Languages	Python, TypeScript, JavaScript, Java, Go, Rust
Backend & Distributed	Distributed systems, microservices, API design, scalable services, service reliability, caching, asynchronous workflows, JSON and serialization
Cloud & Platform	AWS, GCP, Kubernetes, Docker, Terraform, CI/CD, deployment automation, platform engineering, cloud operations, developer tooling
Testing, Reliability & Observability	Unit and integration testing, deterministic verification, regression testing, observability, metrics, tracing, telemetry, production debugging, root-cause analysis
Performance & Runtime	Performance engineering, JVM tuning, profiling, throughput and latency optimization, caching strategies, workload optimization, runtime analysis
Data & Financial Systems	Data pipelines, API integrations, structured data processing, risk reporting, reconciliation workflows, compliance monitoring, financial systems
Engineering & Algorithms	System design, architecture, code review, technical leadership, mentoring, algorithms, data structures, mathematical reasoning, competitive programming

PROFESSIONAL EXPERIENCE

Full-Stack & Applied AI Engineer

Feb 2025 - Jun 2026

Revyl - Remote, US

- Owned full-stack AI product features from product and technical design through implementation, evaluation, release, and production support.
- Built backend services and APIs that connected application workflows with LLM-powered capabilities, external tools, and structured data.
- Developed frontend workflows for AI-assisted features, focusing on clear user experience, predictable state, and reliable API integration.
- Designed evaluation and regression checks for AI outputs, covering edge cases, structured responses, fallback behavior, and changes in model quality.

- Debugged issues that crossed prompt or model behavior, backend logic, data flow, and frontend state, using logs and reproducible cases to identify root causes.
- Contributed to architecture decisions and engineering standards around testing, observability, performance, and safe production rollout of AI-enabled features.

Lead Software Engineer — Jun 2024 - Dec 2024

Ablecoin Finance - Remote, California, US

- Led technical delivery for finance-focused product work, turning business requirements into architecture, implementation plans, and production releases.
- Owned key decisions around service design, APIs, integration boundaries, and reliability while keeping the codebase practical to maintain and extend.
- Raised engineering quality through code reviews, mentoring, stronger testing practices, and clearer release standards, helping the team catch issues earlier.
- Worked directly with product and business stakeholders, resolved cross-system production issues, and kept engineering execution aligned in a fully remote environment.

Software Engineer — Sep 2021 - Apr 2024

Performance Software Corporation - Mabalacat, Pampanga, Philippines

- Took ownership of full-stack features and internal engineering tools from requirement breakdown through implementation, testing, release, and production follow-up.
- Developed backend services and REST APIs with a focus on stable interfaces, maintainable code, and predictable behavior under real production workloads.
- Worked across Python, JavaScript/TypeScript, and modern frontend codebases, contributing to both server-side components and user-facing workflows.
- Expanded unit and integration test coverage and participated actively in code reviews, helping reduce regressions and make changes safer to ship.
- Contributed to CI/CD and containerized development workflows so builds, tests, and deployments were more consistent across environments.
- Diagnosed performance and reliability problems across components, tracing failures to root causes and implementing fixes that improved day-to-day system stability.
- Collaborated directly with engineers and stakeholders, delivered features independently, and supported production releases and operational issues when needed.

Software Engineer - R&D, Financial Systems — Oct 2018 - Jul 2021

AIB (Allied Irish Banks) - Dublin, Ireland

- Developed and maintained backend components for real-time financial services supporting risk reporting, reconciliation, monitoring, and operational workflows.
- Improved microservice performance by approximately 20-25% through JVM tuning, cache optimization, and targeted runtime analysis.
- Built Vue.js dashboards that gave engineering and risk teams clearer visibility into financial activity, system behavior, and compliance-related information.
- Investigated production issues across application logic, JVM behavior, caching, and service dependencies, learning to diagnose system problems beyond a single code path.
- Worked with risk and engineering teams to translate business requirements into reliable technical changes while protecting data correctness and service stability.
- Improved maintainability through refactoring, clearer diagnostics, and more structured testing around performance-sensitive service logic.

EDUCATION

Master of Science - Computer Science — **Sep 2017 - Aug 2018**
University College Dublin (UCD)

Bachelor of Science - Computer Science — **Sep 2013 - Aug 2017**
University College Dublin (UCD)

PUBLICATIONS & COMPETITIVE PROGRAMMING

- Publications: JUnit 5: Injection Enabled Tests; Design Patterns: Event Bus.
- ACM ICPC & MCPC Coach and Committee Member; mentored 50+ competitive programming teams.
- Judge for regional ACM programming competitions, with a long-standing interest in algorithms and mathematical problem solving.
